In the field of diagnostic test devices where a specimen is placed into contact with test reagents, there are many known devices that use capillary action to urge the specimen into contact with a test reagent to detect the presence of the specimen for particular analytes, e.g., for glucose. Typically, these devices include a sample receiver having a porous membrane through which a fluid such as blood is directed to enter the device and the specimen is drawn into contact with a reagent through capillary action. Devices of this type are typically used to test for the

presence of glucose in blood. In glucose test devices, the sample receiver is typically constructed of a porous membrane that has a low-protein binding capacity and a large pore size (i.e., about 100.µm) to allow fluid to enter the receiver. For the test to work properly, the device must be maintained at a temperature between about 0.degree. C. and about 45.degree. C. to avoid spurious readings due to temperature changes of the device. Consequently, the porous membranes of such glucose test devices are typically dried between use to prevent the sample receiver from becoming blocked and causing temperature fluctuations. In some devices, a resilient membrane that retains some water is placed over the porous membrane to provide a

water path that allows the porous membrane to remain hydrated. In some devices, a water-filled channel is placed adjacent to the porous membrane to provide an adequate water path without interfering with the flow of the specimen through the device. Despite these efforts, the water-filled channel devices have a problem in that they are prone to fluid leaking out of the device. When placed in an inappropriate device, the channel leaks and creates a mess that must be cleaned up. Further, when the porous membrane is dried, the water-filled channel can become blocked, causing unreliable readings. The water-filled channel can become blocked when it becomes clogged with dried blood. Thus, a test device that minimizes the chances of

leakage and blockage would be an improvement in the art. List of awards and nominations received by Gucci Mane This is a list of awards and nominations received by American rapper Gucci Mane. American Music Awards 570a42141b
